

**Ramakrishna Mission High School**  
**Teachers' Feedback 2018-19**

**Virtual Classes**

**Sri P.V.R.Durga Prasad, Physical Sciences Teacher :**

- Powerful Power point presentation slides are helping students to understand the concepts very easily.
- I show these slides in my other classes to enrich the knowledge of the students.
- The speakers are very sympathetically encouraging the students to raise their questions. The speakers are clearing the doubts of the students immediately.
- Some speakers are even giving homework to the students and explaining the solution in their next classes. This is helping students in long term retention of the subject.

**Smt.Vidya Rani, Maths Teacher :**

- Virtual classes are exposing me to new approaches of teaching.
- The speakers are explaining the subject very deeply and it is very easy to understand.
- Students are improving in communication skills because of virtual classes.
- Students improve their ability to ask their doubts if they didn't understand the topic and also to respond to speaker's questions.
- Students improved their problem solving skills.
- Students are participating in group discussions and it is improving their peer learning.
- Students are learning beyond their textbooks.
- The concept of "One topic and Different speakers" is also very useful to the students.

### Sri Amarnatha Reddy – Biology Teacher :

- The topics covered in the virtual classes are relevant to our syllabus except for few pharma-related topics.
- We divided our students into seven groups. They discuss about the virtual class topics and write summaries.
- We requested all the speakers to provide PPT one day before the class. This helps us to prepare the students to the class.
- We thank all the speakers for their valuable lectures.

### Smt.Anjani Kumari, Physics Teacher :

- Virtual classes are very useful to the students as these are providing good knowledge in Maths and Science.
- The speakers are from India and abroad. They are very senior and experienced faculty. They are giving different examples about each and every topic to enrich students' knowledge.
- Students are improving their interaction skills through virtual classes.
- It is interesting that one student is taking physics classes and he is inspiring our students.

### B.Karuna Kumar, Staff / Trainer :

- I am really touched by the concern of the speakers to impart the knowledge to our students. They have the ability to identify low performing students and patiently encouraging them to learn.
